For a full bleed design (printed to the edge), extend your artwork across the entire right-hand side of the template shown in grey.

For a bordered design, leave a minimum border of 7mm from the edges of the front of the card. This safe border area is shown in pink.

In Photoshop, select the layer you want to fill, then drag and drop your artwork into place. This will automatically scale and mask it to the correct size.

Save an editable PSD version for your own records and future changes.

When supplying files for print, export a flattened Photoshop PDF with layers deselected.

Check your design carefully before uploading. Everything visible on the template will be printed, including the pink and grey guide layers if they are left switched on.
